## Installation not working properly

Posted by fthomas - 2007/01/12 18:04

---

Ok, I'm just really stuck. Where I'm at is, I've done the complete install, and got it working with the exception that whenever I send emails to an account, it is accepted by the server but it just disappears. Basically, all new emails are getting dumped. I'm really, really stuck.

Here is the tails of /var/log/messages and /var/log/maillog

# tail messages

```
Jan 12 16:59:23 mail last message repeated 8 times
Jan 12 16:59:27 mail MailScanner: MailScanner -15 succeeded
Jan 12 16:59:27 mail MailScanner: succeeded
Jan 12 16:59:48 mail last message repeated 4 times
Jan 12 17:00:13 mail MailScanner: waiting for children to die: Process did not exit cleanly, returned 255 with signal 0
Jan 12 17:00:44 mail last message repeated 6 times
Jan 12 17:01:49 mail last message repeated 13 times
Jan 12 17:02:54 mail last message repeated 13 times
Jan 12 17:03:55 mail last message repeated 12 times
Jan 12 17:05:00 mail last message repeated 13 times
```

# tail maillog

```
Jan 12 17:06:08 mail MailScanner: Using SpamAssassin results cache
Jan 12 17:06:08 mail MailScanner: Connected to SpamAssassin cache database
Jan 12 17:06:08 mail MailScanner: Enabling SpamAssassin auto-whitelist functionality...
Jan 12 17:06:11 mail MailScanner: MailScanner E-Mail Virus Scanner version 4.57.6 starting...
Jan 12 17:06:11 mail MailScanner: Read 759 hostnames from the phishing whitelist
Jan 12 17:06:13 mail MailScanner: ClamAV Perl module not found, did you install it?
Jan 12 17:06:13 mail MailScanner: Using SpamAssassin results cache
Jan 12 17:06:13 mail MailScanner: Connected to SpamAssassin cache database
Jan 12 17:06:13 mail MailScanner: Enabling SpamAssassin auto-whitelist functionality...
Jan 12 17:06:16 mail MailScanner: MailScanner E-Mail Virus Scanner version 4.57.6 starting...
```
