
Installing a LAMP Server on RHEL Clones - add XSL to PHP ?

Posted by wombarrapete - 2007/02/24 03:13

Hi - first of all let me say what a great guide you have provided - it worked flawlessly for me .. thank you.

However I have a problem now as I need to configure PHP for XSL support and I can't figure out how to do it !!

It seems that all I need to do is run the ./configure again and add '--with-xsl' with my already existing configure options as shown on my info.php page (as described here ... <http://au2.php.net/manual/en/ref.xsl.php>) ... the problem is that I cannot find the ./configure file anywhere !!!

Is this because I used yum to install the packages instead of compiling from source ?

If yes .. does that mean that I need to uninstall and rebuild using source files ?

Or .. is there another way to configure PHP for XSL support ?

thanks

pete
